DAVID STANLEY

SPECIALIST TRANSPORT & LIFTING SERVICES

David Stanley Transport and Lifting Services are one of the largest suppliers of self-loading HIAB vehicles in the U.K.

With over 30 years of experience, we hold an unrivalled reputation for safety, reliability and customer service throughout the industry, leading to us being the first choice for some of the largest construction, hire and utility companies in the country. From simple one-off moves to complex lifts, oversized loads and modular building installations, we have it covered.

*You will have peace of mind that
all your work will be carried out
professionally and safely.*

HIAB (Lorry Mounted Crane) Hire

As one of the largest HIAB hire companies in the UK, our range of FORS Gold accredited HIAB vehicles transport loads nationwide and can lift up to 12 tons in weight, with a reach of up to 35 meters, with minimum fuss. Our varied fleet of lorry mounted cranes for hire ensures we have the correct machine if you require an item lifting and shifting.

HIAB is a commonly used term for a lorry mounted crane, these type vehicles have a huge variety of uses often removing the need for forklifts or mobile cranes to be present at the collection and delivery sites, saving our customers large amounts of money.

We operate the largest fleet of 360 degree, front mounted HIABs in the U.K. These FORS Gold vehicles have been specially modified to incorporate an extra set of crane stabilisers in front of the cab, meaning that for the first time loads can be lifted safely at full duties in over the lorry cab and at every other angle. This feature makes our

360 HIAB lorries a very versatile piece of equipment being able to deliver even oversized loads to a site and place it up to over 35 meters away in any direction. (Be sure to ask for a 360 lifter if needed when calling for a quotation)

Running a fleet of over 30 vehicles nationwide means we will usually have a vehicle in your area to attend to your requirements at short notice.

All of our vehicles are fitted with remote control 45t/m - 110t/m lorry mounted cranes or larger and a carry large selection of lifting equipment, meaning that we will always be able to lift and move your cargo safely.

Its not just our on site operators who are fully trained, experienced and helpful but our office staff also have years of transport and crane experience under their belt and would be happy to offer you any advise you may need before booking any job on **01530 510550**.

Cabin & Container Transport, Machinery Cranage, Skating, Double Stacking & Installations.

Cabin transport is what we do best and as one of the largest and most experienced portacabin movers in the UK, we transport more than 70 portable buildings per day. If you need a cabin, container, modular building or any type of sectional building lifting or transporting, let the professionals take care of it. Our reputation is unrivalled.

David Stanley Transport are industry leaders in the Cabin and Container sector, with over 30 years of experience which is also held by most of our driver operators, some having been with our company since it formed more than 30 years ago.

Our driver/operators will collect and deliver your building safely, making sure the unit is totally level, keys have been handed over, and the customer is 100% happy before getting all paperwork signed and leaving the site. They can also double stack units on top of others and erect staircases and landings without the need for extra cranage or labour on site.

For more complex, multiple cabin installations we also supply additional labour and slinger signalers to assist our operators on site if required. David Stanley Transport & Lifting can also undertake total project management if required, with an Appointed Person carrying out a site visit, writing up site-specific Method Statements, Risk Assessments and Lift Plans and planning the whole lift/installation under contract lift conditions when required, working to BS7121. We can also "skate" cabins and other items inside buildings where headroom is too restricted for use of a crane.

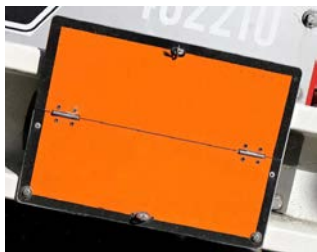

We specialise in lifting and moving many different types of machinery from gantry cranes and specialist printing machines to pumping equipment.

We also supply install teams and slinger signaller's to level, erect, install, set up, dismantle or dispose of equipment ranging from cabin complex's to wheel washes.

ADR (Hazardous & Dangerous Goods)

David Stanley Transport are experienced and compliant in the movement of Hazardous & Dangerous Goods, having various types of ADR equipped vehicles and ADR trained drivers enabling us to carry hazardous goods such as full petrol and diesel fuel tanks of various sizes for our customers throughout the UK.

Specialist Lifting

Fly Jib

We offer a wide range of Hiab Hire but our longest reach lifter are our 82t/m Hiab vehicles (lorry mounted cranes) equipped with both a fly jib and hoist, for those hard to reach places. With a HUGE 35m reach, these latest vehicles are 8 wheeled rigid lorries with 75% of wheels steering for maximum turning circle and can be supplied with or without a draw bar trailer.

These Hiab vehicles are ideal for multiple installations, often alleviating the need for expensive mobile cranes.

Slew Restrictor

We have recently introduced slew restrictors to many of our vehicles. We have 54t/m 360 and 80t/m 360 slew restricted cranes available.

The slew restrictors allow us to safely work alongside live railway lines and traffic lanes as it completely stops the crane slewing over one side of the vehicle whilst maintaining full lifting duties over the other side.

These vehicles are becoming increasingly popular and do get booked up well in advance.

Abnormal Loads

If your load is especially wide or long then it may require an escort by a trained and competent person. David Stanley Transport has abnormal load escort vehicles which are available for hire either on their own or as part of a contracted abnormal load movement.

Contract Lifts & Project Management

We offer a lift planning and contract lift service for all complex jobs and lifts. Our Appointed Person will attend your site and plan the relocation of your items as well as organising a mobile crane or forklift if required in addition to our HIAB vehicle. For you this will take away all the stress of having to do the planning yourself as well as all insurance being taken care of by us for the relocation that you are planning.

Accreditations and Health & Safety

As a FORS Gold HIAB hire operator accredited with SSIP, CHAS, Constructionline and CPCS training, every aspect of our work is carried out to the highest possible health and safety standards.

Whether we are working at height, planning complex lifts or carrying out a demolition on site, each element of risk is minimized to prevent harm to people, property and the environment.

David Stanley Transport has a long-standing reputation in the industry for our high level of health and safety, of which we are very proud.

We are the safest choice, trusted by all major construction companies throughout the U.K. from our Midlands base on a daily basis including Balfour Beatty, Kier, Skanska, Costain and many more.

Portacabin and Container Disposal

Often our customers require portacabins or containers or other items removed from site either because they are no longer required or because the building is no longer usable due to its poor condition.

We can give an instant quote for the building disposal from a couple of photos and once accepted our team will organise the swift collection of the building on a date that suits you by one of our experienced Hiab operators, ensuring minimum disruption on your site. We hold all the legally required waste carrier's licences for the removal.

We can normally take the cabin or container away in one piece, even if it is in a poor condition, without the need for it to be demolished on site, where it will either be refurbished and found a new home or broken down into its individual components and recycled.

We will always recycle buildings wherever possible minimising the environmental impact.

STANLEY MODULAR BUILDING SERVICES

Working closely with David Stanley Transport & Lifting, we offer a complete Council Approved Modular building service, including Relocations, Disposals, on-site Demolitions and Sales.

Offering complete project management, the services we offer include:-

Relocations

From the moment the building is handed over to us our trained fitters will carefully dismantle the building into transportable sections, David Stanley Transport will then take on all the crange and transport needs from the simplest of lifts to the most complex, often being asked to crane buildings over other buildings etc. once safely in its new position our fitters carefully refit all facias, covers and seals ensuring all work is done to the highest standard.

Disposals

Often our customers require modular buildings removed from site either because they are no longer needed or because the buildings age has rendered it no longer in a usable condition.

What ever its condition we can normally take the building away in one piece, without the need for it to be demolished on site, where it will either be refurbished and eventually resold or broken down into its individual components and recycled. If we think the building can be refurbished then this will reflect in the cost of the disposal.

We will always recycle buildings wherever possible minimising its environmental impact.

Demolitions

Sometimes due to fire damage or poor condition of the buildings, no other options remain except to demolish on site, in a safe manner.

Our 30 year experience dealing with modular buildings means we are well equipped for such work, the building will be demolished on site and removed to specialist recycling plants.

No More Paper!!

We use paperless technology to deliver seamless service to all our customers.

Benefit from:

- Instant Electronic proof of delivery confirmation with signature capture
- On site capture of your own signed paperwork
- Receive pictures of your load before collection and after delivery via email on job completion
- Smart-scheduling and routing means we can offer you more convenient delivery slots
- Constantly monitored driver behaviour – to ensure every mile driven is safe, responsible and results in less vehicle emissions.
- Real-time GPS satellite tracking of our vehicles

What do our customers think?

Within a fast-paced, time-critical industry delivering portable accommodation up and down the breadth of the country, Jo, Mick, and the wider team never falter. Their experience and knowledge has proven invaluable, making them an integral factor in our supply chain and, in turn, fundamental to the large-scale festivals and event we supply all year round.

David Stanley Transport and Wernick Events continue to collaborate to meet the ever-changing requirements of our customers, and for this, kudos to them all on how they resolve any difficulties with minimal fuss, professionalism, and an end result that is exemplary.

STANLEY CABINS

We always have an ever changing stock of used and nearly new cabins, containers and modular buildings for sale.
